

EXTENSION/EVALUATION

2C. You have just learned how humans and nature both recycle. To show your understanding of what can be recycled, complete the following chart. Think of the trash you threw away from your last lunch. Complete the chart below with the items from your lunch trash.

| Nature Recycles | Humans Recycle | Not Recyclable |
|-----------------|----------------|----------------|
| poop | glass bottles | food |
| leaves | plastic | Tissues |
| fruit | paper | Bones |
| Dead animals | card-board | Napkins |
| | Metal | Tinfoil |

1. How humans recycle 2. How nature recycles 3. Three reasons why recycling is important

8. Explain how humans and nature recycle and why recycling is important.

Humans can recycle by first get a recycle bin. Then ^{start} recycling re-usable things. Nature recycles when an animal dies another animal eat's it. Recycling is important because if you don't recycle the whole world will become a big pile of trash.
